**7.3 Thermal Profile:** Due to variances in equipment, solder pastes and applications (board design, component density, etc.), Samtec does not specify a recommended reflow profile for our connectors. The processing parameters provided by the solder paste manufacturer should be employed and can usually be found on their website.

All of Samtec's surface mount components are lead free reflow compatible and compliant with the profile parameters detailed in IPC/JEDEC J-STD-020 which requires that components be capable of withstanding a peak temperature of 260°C as well as 30 seconds above 255°C.

## Samtec Recommended Temperature Profile Ranges (SMT)

### Sn-Pb Eutectic Assembly

Preheat/Soak (100°C-150°C)	Max Ramp Up Rate	Reflow Time (above 183°C)	Peak Temp	Time within 5°C of 235°C	Max Ramp Down Rate	Time 25°C to Peak Temp
60-120 sec.	3°C/s max.	40-150 sec.	235°C	20 sec. max.	6°C/s max.	6 min. max.

### Pb-Free Assembly

Preheat/Soak (150°C-200°C)	Max Ramp Up Rate	Reflow Time (above 217°C)	Peak Temp	Time within 5°C of 260°C	Max Ramp Down Rate	Time 25°C to Peak Temp
60-120 sec.	3°C/s max.	40-150 sec.	260°C	30 sec. max.	6°C/s max.	8 min. max.

These guidelines should not be considered design requirements for all applications. Samtec recommends testing interconnects on your boards in your process to guarantee optimum results.

**7.4 Maximum Reflow Passes:** The parts can withstand three reflow passes at a maximum component temperature of 260°C.

**Series:** [ADM6/ADF6](#) 0.635 mm (.025") AcceleRate® HD High-Density, High-Speed Four-Row Connectors

**7.5 Stencil Thickness:** The stencil thickness is .005" (0.127 mm)

**7.6 Placement:** Machine placement is strongly recommended.

**7.7 Hardware:** Board-to-board standoffs are recommended to provide a robust mechanical connection. Samtec offers two different types:

- 7.7.1 Traditional Standoffs (SO)** – Rigid design to statically support board-to-board applications. See options here: [SO - Board Stacking Standoff](#)
- 7.7.2 Jack Screw Standoffs (JSO)** – Serve same function as traditional standoffs but unique, nested construction facilitates the mating and unmating process. This is especially helpful for multiple connector applications where the mating and unmating forces increase with the number of connectors used. See options here: [JSO - Jack Screw Standoffs](#)
- 7.7.3 Recommended Standoff Part Numbers:** A standoff size is recommended for the lead style combination of the mating ADM6 and ADF6 Parts based off the "A" dimension.

**Series:** ADM6/ADF6 0.635 mm (.025") AcceleRate® HD High-Density, High-Speed Four-Row Connectors

**7.8 Reflow Environment:** Samtec recommends the use of a low-level oxygen environment (typically achieved through Nitrogen gas infusion) in the reflow process to improve solderability.

**7.9 Cleaning:** Samtec, Inc. has verified that our connectors may be cleaned in accordance with the solvents and conditions designated in the EIA-364-11 standard.
